

SEARCHIO  Your Bathing desire

**YOUR BATHING
DESIRE**

PRODUCT CATALOGUE

**Stream of water is like a powerful
positive mind. It gathers volume and
force from hundreds of tributaries
all along its course.**

It is that stream of water reaches at your home
and in your peaceful abode. The water that
energies your day.

The precious gift by lord on earth is water.

SEACHIO 

SEARCHIO Your Bathing Partner

EARTH FRIENDLY

We honor our responsibility to the planet by recycling tonnes of brass and crafting every product with care for the environment. Designed sustainably and made responsibly, each creation reflects our commitment to preserving and respecting Mother Earth for generations to come.

Quality

Equipped with an intensive experience and unwavering technical support, that extends from design innovations to meeting distinct standards of quality, SEACHIO strives to consistently meet the desires and expectations of its patrons.

Armed with highly advanced equipments and machinery, handled by certified professionals, SEACHIO runs integrated quality tests, every step of the way. Right from raw materials to finished goods, the products undergo a series of processes that include Water pressure test, micron thickness test and Material testing, among others to harness quality that stand at par with international standards. At SEACHIO, excellence is not a responsibility, it is a prevailing attitude.

INSPIRING BATH CONCEPTS

CUSTOMER GUIDELINES

- Use 25mm pipes rather than 20mm to ensure better water flow and to overcome the reduction in diameter of the pipeline due to scaling inside the pipeline.
- Keep the minimum number of bends in the pipelines and make it travel straight and vertical as far as possible.
- All the supply must have vent pipes, And these vent pipes facilitate in removing air-locking within the water to provide a maximum flow of water from the fittings.
- Test the working of all the concealed fittings installed on a high pressure for leakage before plastering or fixing the line.
- Clean the aerators provided within the things at regular intervals for an ideal foam flow of water from the fittings.
- Place the outlet point within the overhead tank a minimum of 25cm higher than the bottom level of the water tank. These prevent the flow of external particles, sand, etc. along with water supply into the fittings and thereby preventing the possible damage to the working parts.
- Clean the tank thoroughly before the supply starts. It is suggested that the overhead tank must be cleaned at regular intervals to avoid the deposition of foreign particles.
- Clean the fittings regularly with SEACHIO STEEL CLEANER to remove scaling/stains. Do not use strong detergents as this may cause damage to the chromium finish provided in all SEACHIO products.
- Do not use harsh cleaning agents containing abrasive and acids, instead use a soft sponge or wet fabric with cleaner water/diluted vinegar to safeguard the color coated finish.
- To protect the excellent finish of fittings from dirt stains and other damages, cover them with cloth/poly pack after their installation till they come into actual use.
- We suggest that center distance for hot & cold inlet for all types of wall-mounted mixers should be maintained at 165mm, in which any case of our wall mixers from different ranges can easily installed without any problem.
- For any type of technical or service assistance, please contact the nearest SEACHIO branch office, area representative or dealer.
